

Premium Wood Chip

Description & Process:

- This product is made from recycled redwood fence posts, lumber & wood.
- Does NOT contain weed seed or plant material originating from SOD
- Feedstock is sorted at the facility and contained a separate pile.
- Nails & metal are removed via a two-step magnet process.
- This product is not suitable for playground use
- The material is processed to produce a typical particle size of 1"-3" inches.
- Premium Wood Chip is a natural ground cover that will reduce erosion & water loss.
- 1 cubic yard of Premium Wood Chip weighs approx. 500 lbs

Benefits:

- Sustainable as surface mulch in small or large residential or commercial applications & parks.
- Can be used as decorative bark.
- Good for restoration purposes in natural habitat environments.
- Larger wood particles remain on the surface and break down over a longer period of time.
- Water reduction: increases water infiltration and retention, decreases evaporation

Application:

- Apply 2-3" inches deep over bare soil after planting
- An application rate of 10 yards per 1000 sq. feet is recommended for a 2-3" inch mulch layer.
- Avoid direct contact with plant stems by pulling back about 2" inches from plant crown or stems

Vision Recycling's ground cover products are made from recycled, unpainted clean wood, yard trimmings & lumber. As this is a repurposed material we strive to have the best quality products on the market. Please note: Vision Recycling cannot guarantee 100% clean material. However, we continue to keep our standards high to provide the best quality material for your needs.
